Trusting AI:

What does it mean to trust and should we?

Liz Darnell
School of Computer Science
tPOT Symposium
7 May 2025

AI is happening... and fast.

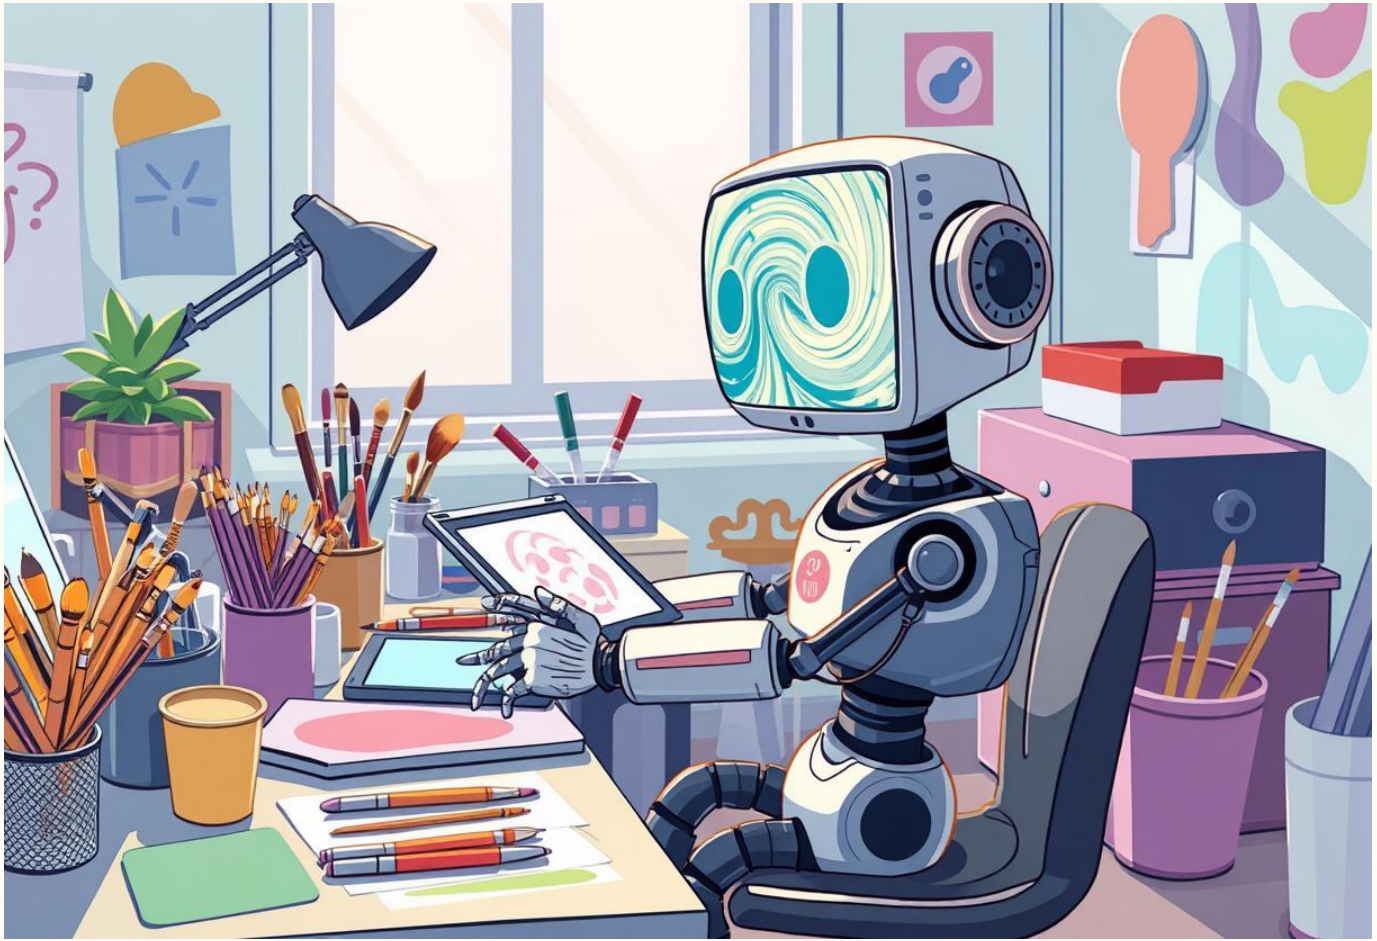

So, what is trust?

Defining Trust

“Trust is a psychological state comprising the intention to accept vulnerability based on positive expectations of the intentions or behaviour of another” [2:395].

Generated on Gamma with the prompt “anthropomorphic generative AI” using the Flux Fast model.

Developing a Mixed-Method Protocol for Understanding and Measuring Trust of Generative AI Systems in the Workplace

Phase 1:

Initial survey

The Standard Trust Question

Generally speaking, would you say that most people can be trusted, or that you can't be too careful in dealing with people?

Generally speaking, would you say that most generative artificial intelligence can be trusted, or that you can't be too careful in dealing with generative artificial intelligence?

Generally speaking, would you say that most people can be trusted, or that you can't be too careful in dealing with people?

How frequently do you use generative AI in the workplace?

What AI tools do you use the most often?

What types of tasks do you use or not use these tools for?

Phase 2:

Task with AI tool & trust scale

Checklist for Trust Between People & Automation [1:30]

The system is deceptive.

I am suspicious of the system's intent, action, or outputs.

I am wary of the system.

I am confident in the system.

The system is reliable.

I can trust the system.

Phase 3:

Semi-structured Interview

Topics

The task and trust of the tool that was used.

The participant's individual use of generative AI.

What the role of AI has been in their workplace.

The participant's general trust.
